

NNFCC Christmas Wishlist 2022

Philips Eco Conscious Editions

This lovely looking collection of kitchen gadgets (kettle, toaster, blender and coffee machine) would be a great addition to any kitchen. The collection is made from PP plastic with up to 94% of the plastic coming from plant based used cooking oil or plant waste and is designed for performance and longevity.

Playmobil – Wiltopia

Playmobil's new range made to engender excitement in nature is their first made over from over 80% sustainable material. Recycled plastics including recycled fridges and added to biobased plastics to make this lovely collection. Lots of exciting ideas for play, with their advent calendar providing a wonderful range of Playmobil animals to populate a child's imagination (and play).

TIME gravel bike – ADHX (Alpe d’Huez X)

OK, so maybe this is just me dreaming a little too big, but can you blame me? The frame of this bike is made from a braided carbon structure using biobased Dyneema®, a fiber 15 x stronger than steel and light enough to float on water. And you will save the planet because it is so beautiful that you’ll ride rather than drive for any journey (and because you had to sell the car to afford it).

Link

Lovevery – Block Set

This set of wooden blocks is made of a wonder material, sustainable, renewable, durable. Ok you get the point, it’s made of wood. It’s easy to focus our attention on all these new flashy plastics made from plant derived oils and sugars but sometimes it’s just good to use the natural stuff, sustainably grown and harvested and locking away carbon for as long as the product remains useful.

Link

Reebok and National Geographic Footwear

Reebok's new collection of footwear is a design marvel! Each item combines the patterns of several wild and extinct animals pulled together into something remarkable, drawing attention to the troubles of many of these amazing animals. And if that is not enough the shoes are all made from at least 50% plant based material.

Link

Nescafé Dolce Gusto

Neo – Nescafé's latest generation of coffee machine and pods is their most sustainable yet. The new coffee pods are paper-based, home compostable and use less packaging than current capsules. Added to this the coffee machine has different brew settings for your coffee, so whether you prefer espresso, cappuccino or filter coffee this machine has you covered.

N°1 De Chanel Cream

Can beauty ever be sustainable? Well, Chanel’s range of beauty products has benefits that are more than skin deep, with over 97% of ingredients being from natural origin and packaging made bio-based materials including a lid from Sulapac, a proprietary material, from residues of wood (FSC) and Camelia seed shells. You could say that this product combines technology, style and beauty care in one pot.

Link

CASIO PRG340

I really like this watch! It has more features than a Swiss Army knife and styling to compete with a Swiss watch and best of all it is made almost entirely out of plants. The plastic components of this watch are made from castor seeds and corn and with its hardwearing design you will be more than ready to go for an adventure in the great outdoors.

Link

Reishi from MycoWorks

You may be thinking that you haven't got mushroom in your life for another hat. Time to think again! These amazing hats are made from a leather substitute called Reishi. Reishi is an engineered mycelium technology which means it is 100% natural materials, plastic free and animal free. And let's be honest, anyone with one of these hats would be a really fun guy!

Link

The Mini Bird Pizza Kit

The simplicity of this product is brilliant. Made of natural and biodegradable materials and with one aim, to enthral the next generation with a love for the nature all around us. If that isn't an investment in the future then I don't know what is.

Link

An-Du Back to basics shampoo bar

This back to basics shampoo bar uses sophorolipids – biologically grown surfactants (soaps) made by fermentation using a yeast found around honey and bees. These sophorolipids are produced on a small scale by nature and are now being made at larger scale to replace the fossil based ingredients in cleaning products. Because they come from natural yeasts these products are biodegradable and are more gentle on skin than traditional soaps.

Pangaia Activewear

And after Christmas comes the compulsory new year push to get active. Ok, so you had one Ok you had 16 too many minced pies, you will hear no judgement from me. But I have got something to make that early morning run a bit more bearable. It's the knowledge that your new tracksuit is made from bio-based material. The new Activewear 3.0 range from Pangaia is made from 99.99% bio-based Evo Nylon and 30% bio-based Creora® elastane and is a first of its kind. OK so it might not be the most exciting present, but it might give you a slight warm glow inside.
